

Adv DevOps Assignment 3

Aim: To create a S3 bucket and perform upload, copy, delete operations

Lab Outcome attained:

LO1 :

To understand the fundamentals of cloud computing and to be fully proficient with cloud based devops solutions deployment options to meet your business requirements.

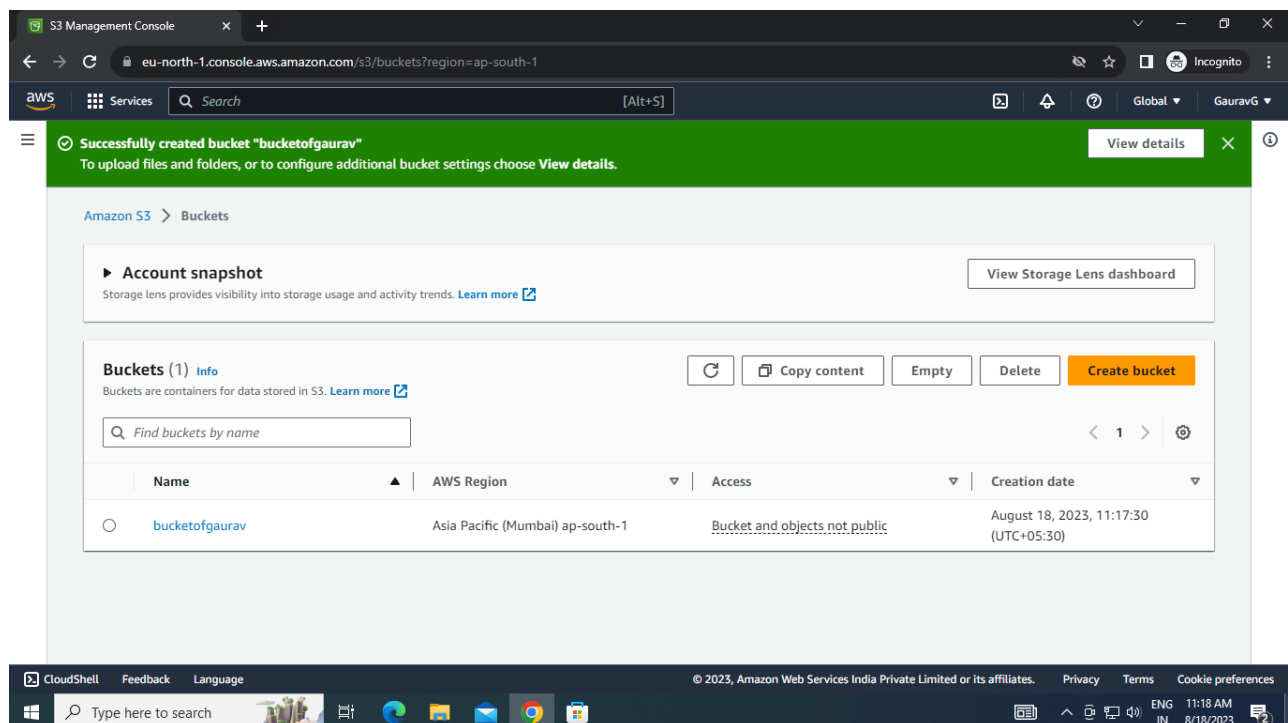

Lo2 :

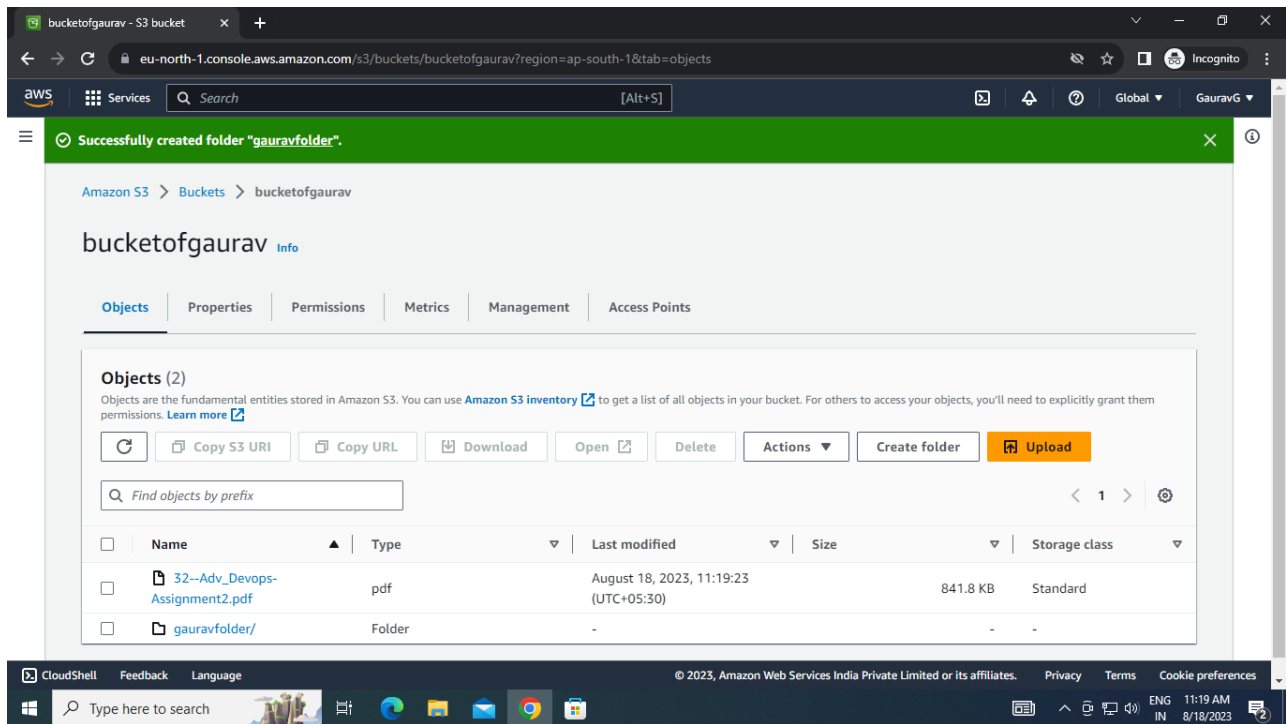

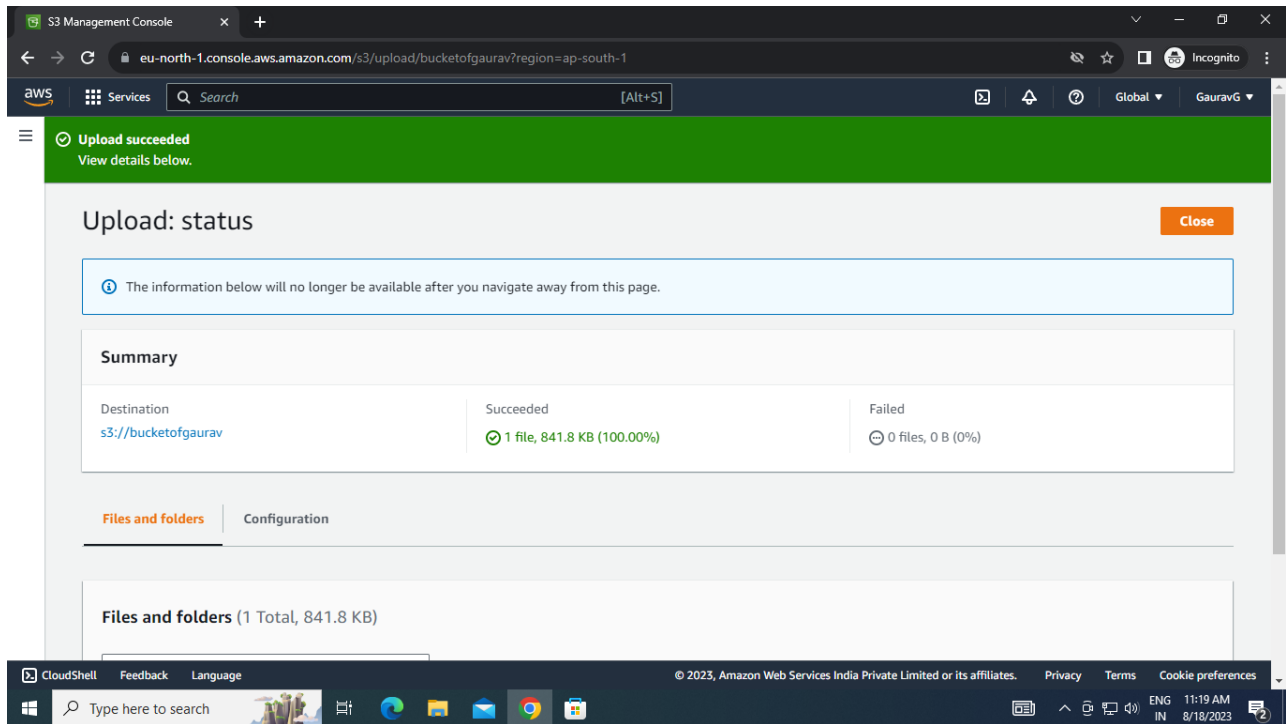

To deploy single and multiple container applications and manage application deployments with rollouts in kubernetes

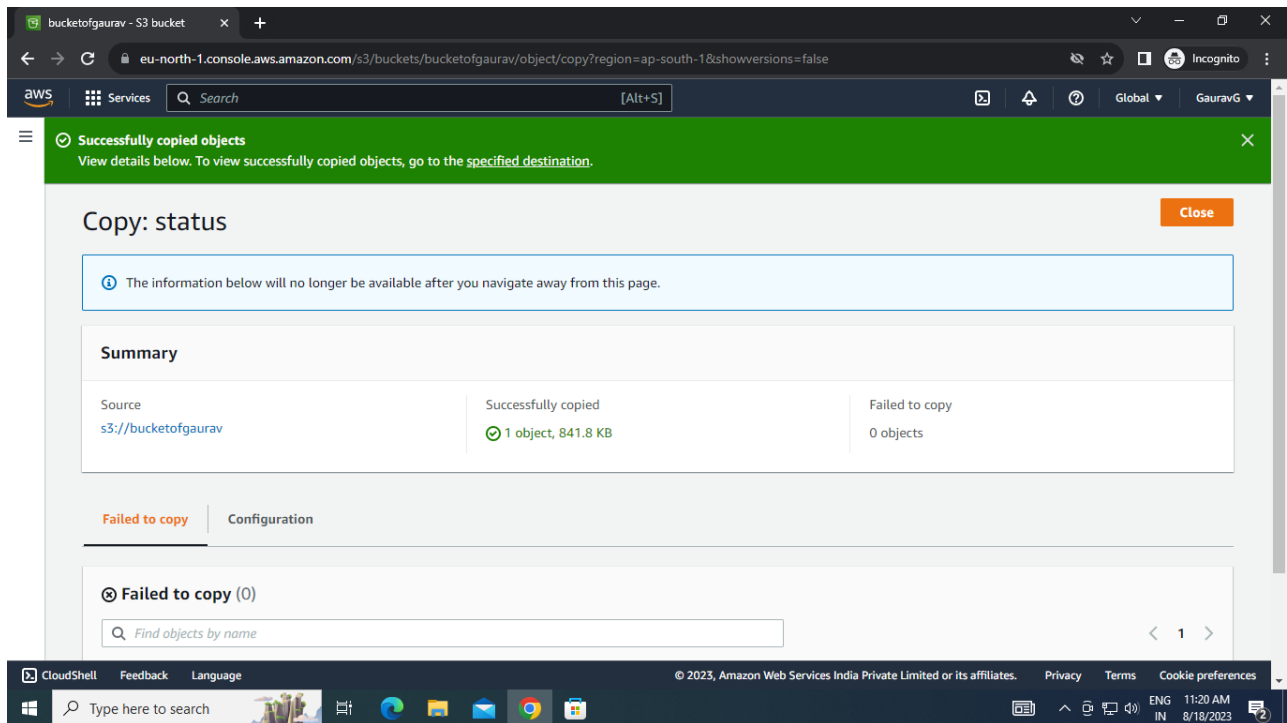

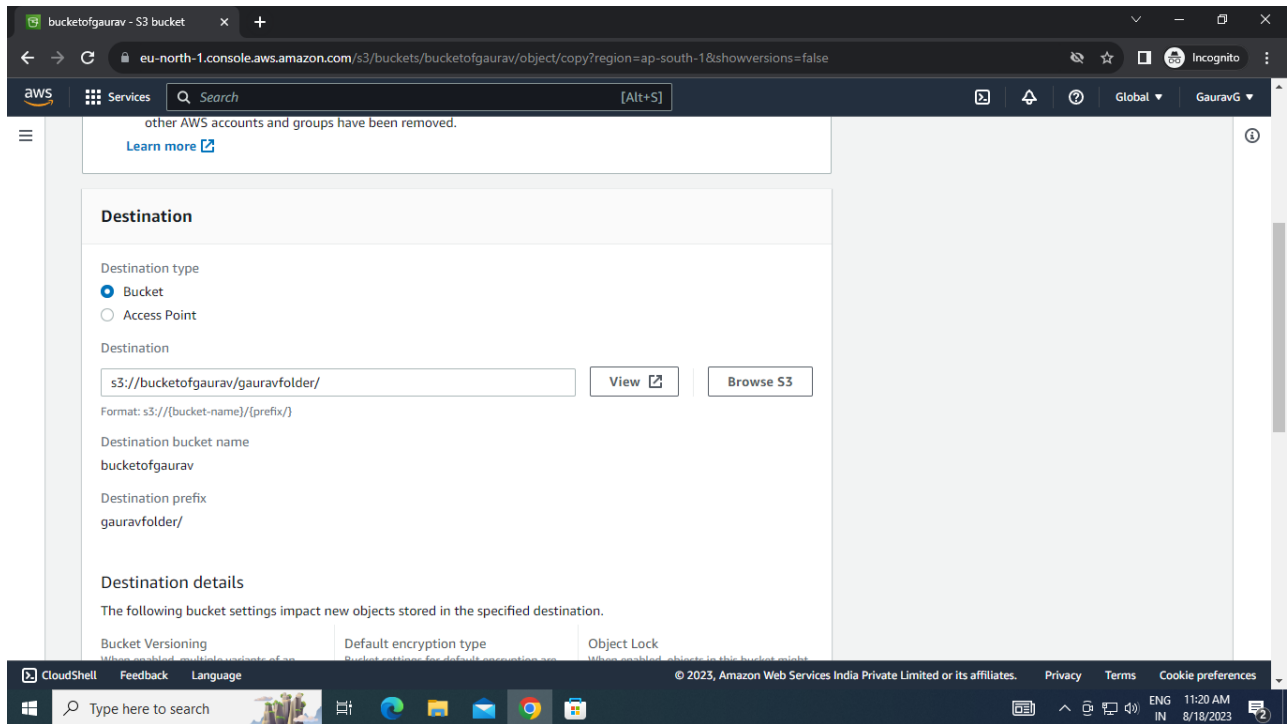

Theory:

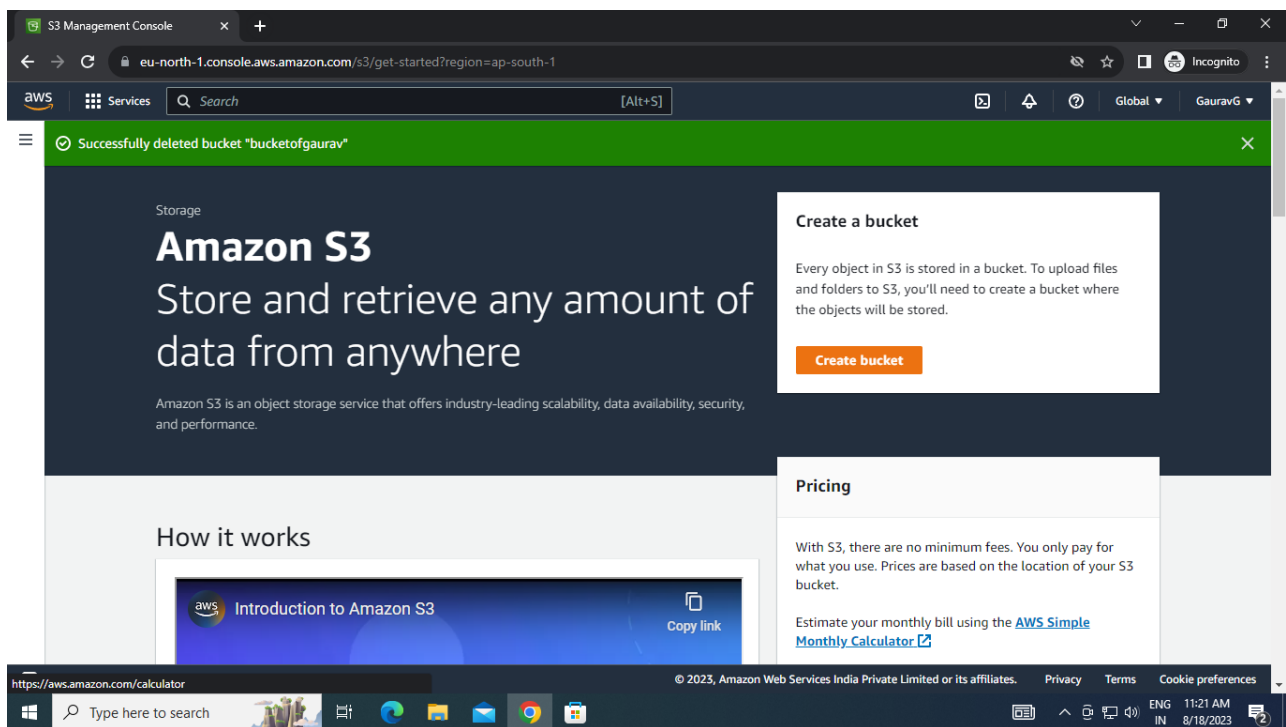

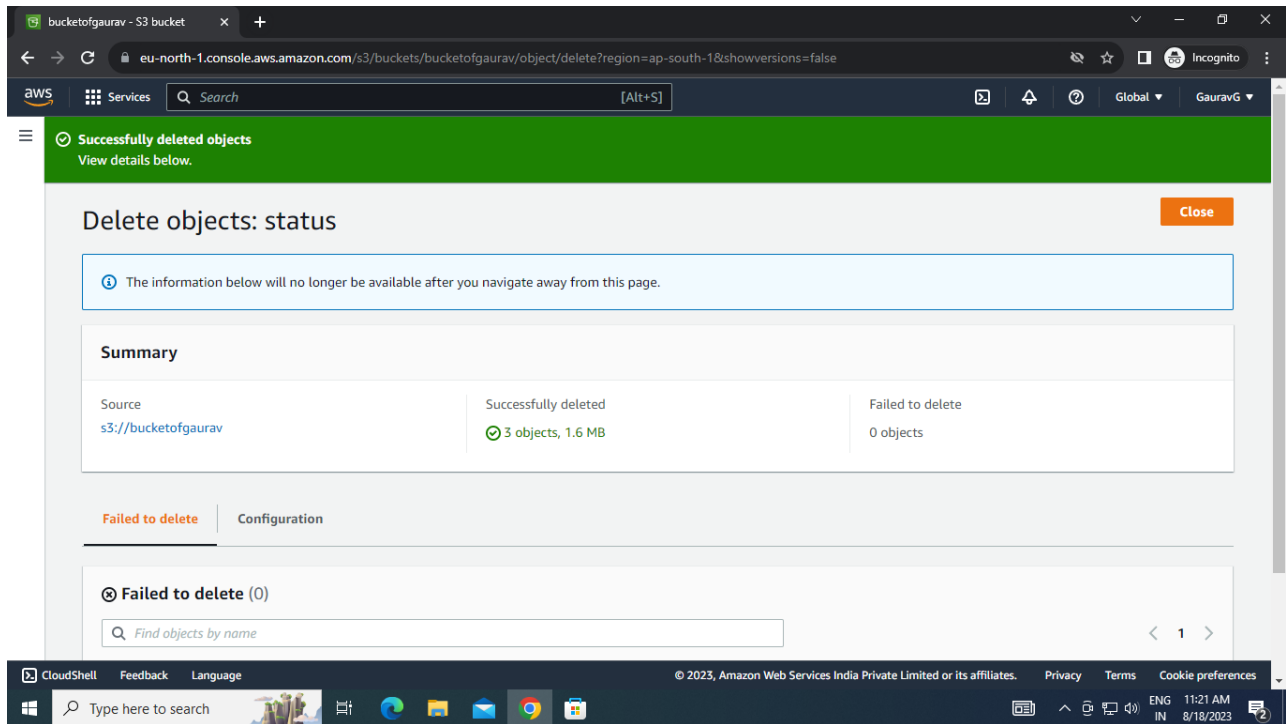

Amazon Simple Storage Service (Amazon S3) is an object storage service that offers industry-leading scalability, data availability, security, and performance.

Customers of all sizes and industries can use Amazon S3 to store and protect any amount of data for a range of use cases, such as data lakes, websites, mobile applications, backup and restore, archive, enterprise applications, IoT devices, and big data analytics. Amazon S3 provides management features so that you can optimize, organize, and configure access to your data to meet your specific business, organizational, and compliance requirements.

Conclusion: We understood the working of S3 aws and performed various operations such as upload, copy and delete a file.
